Mining

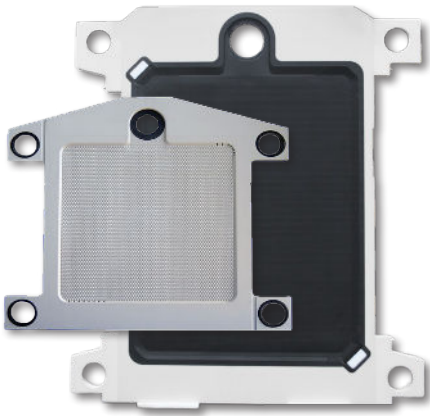

Innovation – built on experience
made in Germany

Mining Plates

Setting the Standard

in Mining Filtration globally.

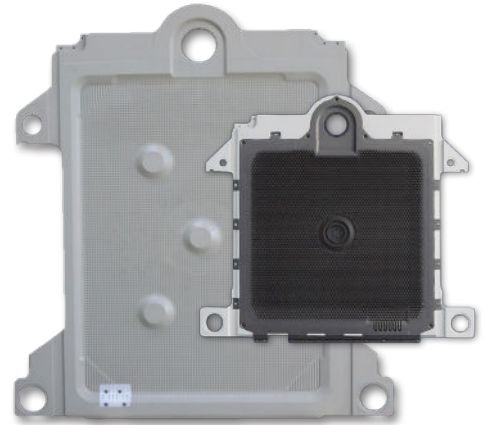

Selected Top Mining Plates by JVK®.

Metso Types

**Custom made
Mining Plates**

Ishigaki Types

Filtration Systems

High Quality – made in Germany!

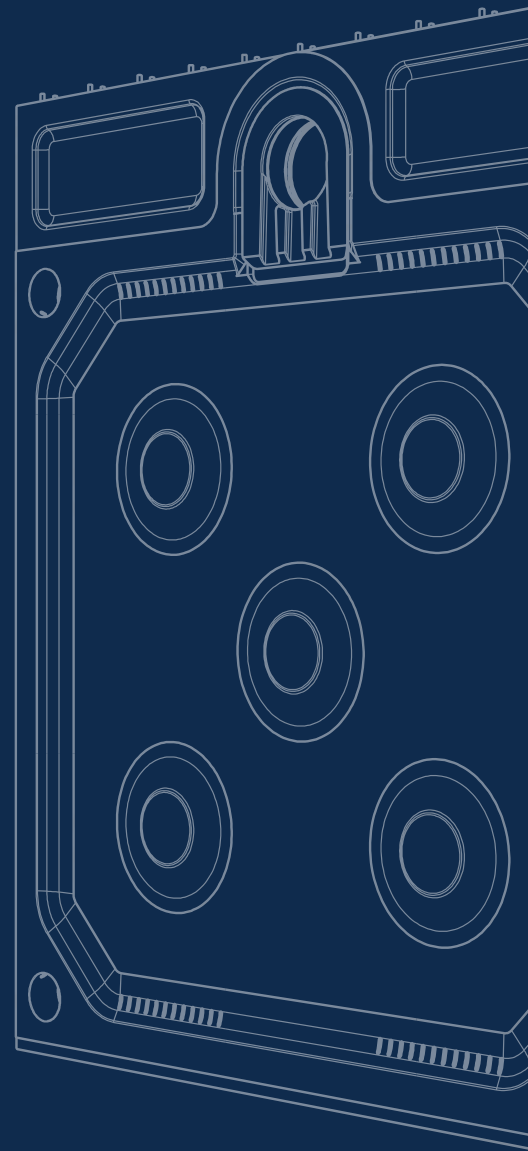

Looking for filter plates that fit without compromise?
At JVK, we manufacture with mainstream models –
including:

- **Metso-Types**
- **Ishigaki-Types**
- **Diemme-Types**
- **JVK Mining Plate 2000**
- **JVK Mining Plate 2500**
- **JVK Mining Plate 3500**
- **Sala Plates**
- **Lasta Plates**
- **JVK covers even more OEM
filter plate designs!**

Whether you're replacing existing plates or
sourcing for a new project, our plates match
OEM standards - at up to 50% lower cost.

Need a quick spec check?

Precision made in Germany.

Rapid Prototyping or Spare Parts on the fly?

JVK turns your ideas

into reality in short time!

General Spare Parts & Accessoires

- Replacement Membranes
- Feed Shoes
- Distribution rings
- Support Rings
- Clamping Rings
- Shabers
- 2-way taps
- Filtrate outlet insert

Filtration Systems

SnapFit®

One System in Filtration Technology

to rule them all.

Save precious resources within your filtration facilities

Make it fit.
With
SnapFit®.

Save endless hours on switching membranes on plates and filter cloths for your staff. Choose SnapFit® to handle cloth and membrane switches easy and effortless. Choose our renowned and patented technology. SnapFit®.

SnapFit® System – Tool-Free Connection with Precision

The SnapFit® system developed by JVK is an innovative, tool-free fastening solution for attaching accessories to filter plates. It is specifically designed to make the installation and removal of filter cloths, support rings, and distributor rings faster, safer, and more efficient.

Typical applications for the system:

- Membrane mounting
- Attaching filter cloths
- Fixing distributor rings
- Mounting support rings

Key Benefits:

- **Quick Installation & Removal**
No screws, no tools – SnapFit® components lock securely in place with a simple push.
- **Reduced Maintenance Effort**
Perfect for regular cloth changes or servicing – saves time and minimizes downtime.
- **High Process Reliability**
Firm hold even under pressure – prevents slipping or detachment during operation.
- **Ergonomic & Safe**
Lowers the risk of injury and reduces strain on operating personnel.

The SnapFit® system is fully compatible with all standard JVK filter plates and can also be retrofitted to existing installations.

Health Check - Extend your warranty*

Maximized Performance.

With the JVK Health Check Services.

At JVK, we know that even the most reliable filter presses require regular attention to maintain peak performance. Our **Health Check and Optimization Service** ensures your equipment operates at its best, avoiding costly downtime and unnecessary loss of product.

A key element of this service is the **JVK Membrane squeeze indicator** – a simple yet powerful tool that helps you detect leaks immediately. By identifying volume flow as they happen, you can act quickly to prevent reduced filtration efficiency, product contamination, or extended cycle times.

*The warranty can be extended through the JVK health checks.

Our experienced **JVK Technical Engineers** visit your site to conduct a comprehensive inspection of your filter press. We check critical components, assess wear, and verify optimal operating parameters. If required, we will assist in integrating the Membrane squeeze indicator directly into your press, ensuring a seamless fit and reliable monitoring.

By combining expert diagnostics with innovative leak detection, JVK helps you **optimize filtration, extend equipment lifetime, and protect your investment**. Whether you operate in mining, chemicals, food processing, or wastewater treatment, our goal is the same – **keep your filter press running at maximum efficiency, day after day.**

JVK Membrane Squeeze indicator set

Ensures safe, efficient filter press operation by clearly showing when residual pressure is released-protecting people, equipment, and uptime.

Laboratory Scale Equipment

We put the power back into R&D.

Because R&D matters.

At JVK, we provide complete laboratory-scale filtration systems – designed, built, and fully customized to meet the specific needs of your research and development projects. From compact laboratory filter presses to fully tailored setups, we manage the entire process: engineering, assembly, and integration – all in a controlled, small-scale environment.

Our solutions give your R&D team the ability to test new materials, optimize filtration parameters, and simulate production processes with precision. Whether you need equipment for short-term testing or long-term use, we offer **both purchase and rental options** – and you can choose to have an **experienced German engineer** on-site to ensure smooth setup, operation, and training.

We work **not only in-house at our JVK facilities but also directly on your site**. This means you can benefit from our expertise, hands-on support, and rapid adjustments without disrupting your workflow.

Our in-house capabilities include **additive manufacturing of custom parts**, enabling rapid prototyping and quick adaptations for unique testing requirements. We also perform **flow tests, pilot-scale trials, and filtration performance evaluations** to ensure every system meets your technical and operational goals.

JVK Services – We put the power back into R&D. Because R&D matters.
